ASX ANNOUNCEMENT
23rd January 2008

DRILLING UPDATE

- **DOIR approves Program of Work for auger drilling at Donald Well**
- **The drilling program will commence in February and is designed to identify geochemical anomalies associated with the base of hardpan.**
- **These anomalies will later be evaluated by RC and diamond drilling.**

Revere Mining (ASX Code: RVM) is pleased to announce that the Department of Industry and Resources has approved the Program of Work (POW) for auger drilling at Donald Well. Previous geochemical sampling over the Donald Well prospect has defined an extensive low-level gold anomaly coincident with the South Boundary Fault and the recently defined Greater Revere Alteration Zone (GRAZ) which has not been drilled previously.

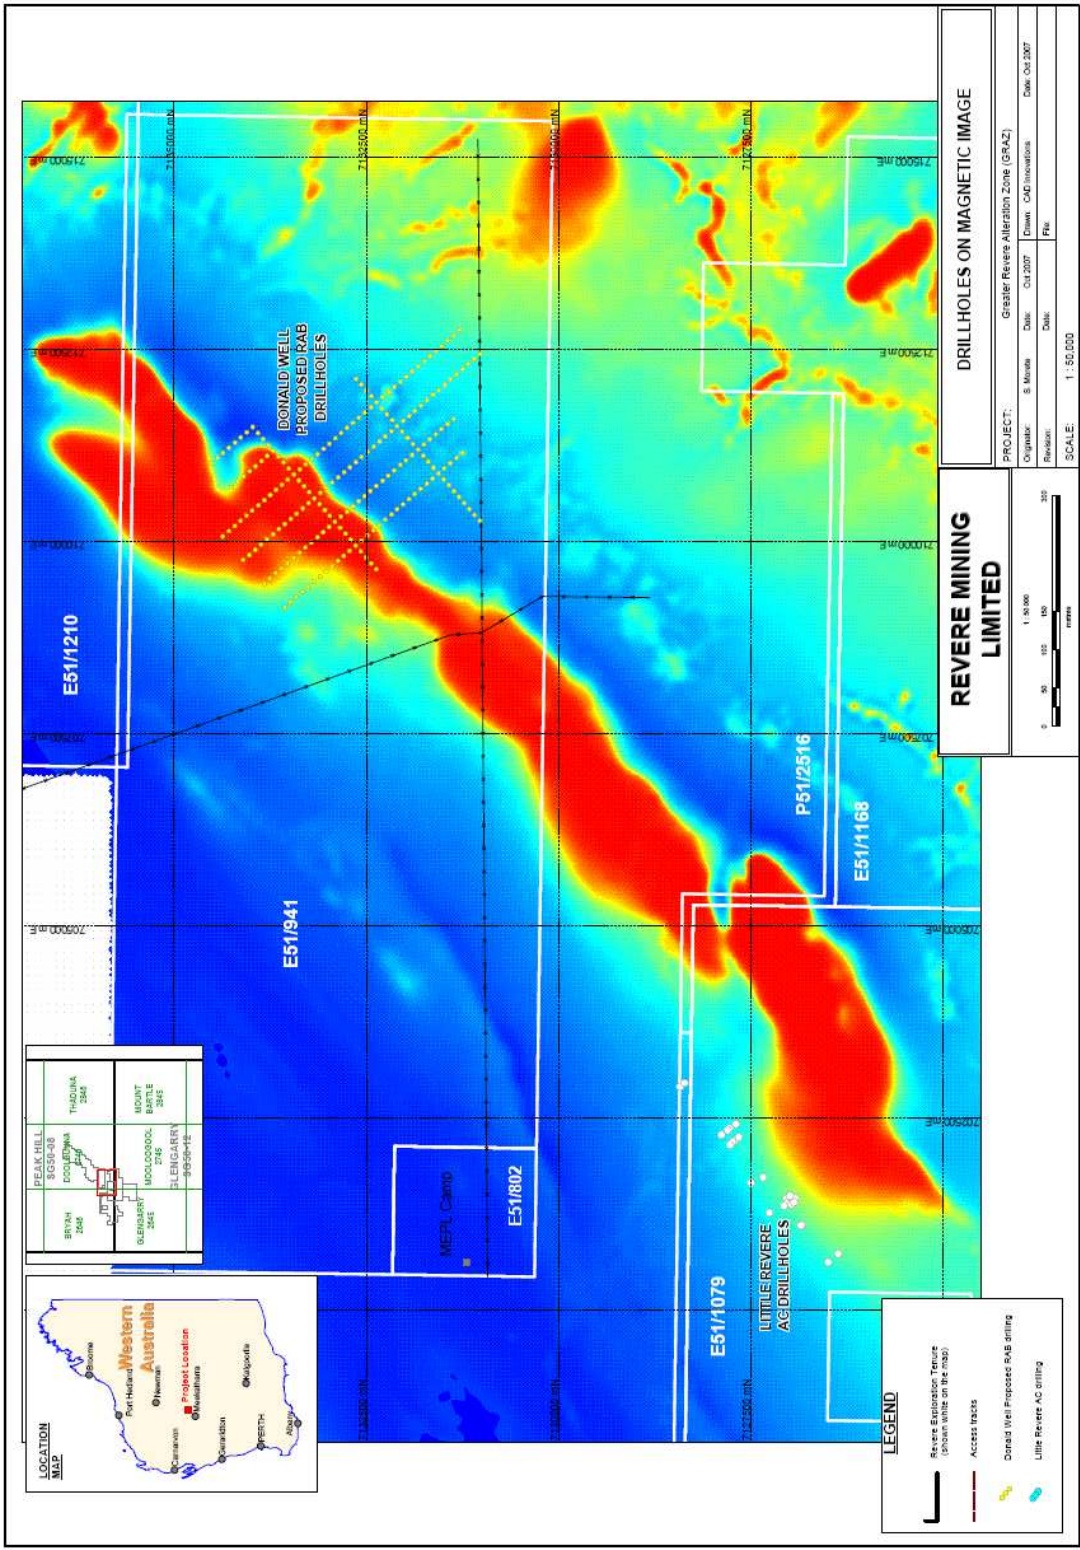

The drilling program has been designed to sample the base of hardpan (BOH) which overlies the weathered parent rock. The BOH is considered to lie within 5m of the surface. BOH anomalies will be tested by reverse circulation drilling with possible diamond tails.
