

Revere-Doolgunna Project Drilling Planned To Commence 19 September 2009

Enterprise Metals Limited ("Enterprise" or "the Company", ASX: "ENT") wishes to announce that the final stage in obtaining approval for the planned Doolgunna drilling program will occur on the 19th of September 2009.

Four Programs of Work ("PoW") for the planned drilling were submitted to the Department of Mines and Petroleum in June 2009. These PoW's were progressively approved during July. The Company has now been informed by the Representative Body of the Native Title Claimants that Heritage Surveys of the planned drill sites will be completed by 19th of September 2009.

Subject to positive results from these clearance surveys, it is expected that RC drill testing of the five anomalous areas identified to date at Doolgunna will commence on or shortly after 19th September 2009. The RC holes at Golden King and Doug's Find are primarily targeted at IP anomalies generated by the May 2009 IP surveys. The IP anomalies are broadly coincident with known gold occurrences and/or copper geochemical anomalies. RC drilling at Donald Well, Beefwood, Doolgunna and Shed Well will be directed towards the VTEM conductors generated in July 2009.

BACKGROUND TO REVERE PROJECT (100% INTEREST)

The Company's Exploration Licences cover an area of 1,300km² and are located between 90 - 130km northeast of Meekatharra in Western Australia and cover Palaeoproterozoic rocks affected by the Capricorn Orogen, and are predominantly located within the Yerrida Basin. The primary target sought by the Company is one or more large mesothermal-style gold stockwork systems and/or volcanogenic massive sulphide copper/gold systems.
