## **Heritage Survey Clears All Drill Sites at Doolgunna RC Rig in Meekatharra for Commencement of RC Drill Program**

Enterprise Metals Limited ("Enterprise" or "the Company", ASX: "ENT") wishes to announce that the Heritage Survey at its Revere-Doolgunna project has been completed successfully, with all 41 proposed drill sites and access tracks being cleared by representatives of the Yugunga-Nya Claimant Group.

The RC drill rig is arriving in Meekatharra this afternoon and will proceed to the first drill site to commence drilling on Saturday 19<sup>th</sup> of September 2009.

The drilling program of approximately 10,000 metres in total (41 holes x ~250 metres per hole) will test the five anomalous areas identified to date at Doolgunna. The RC holes at Golden King and Doug's Find are primarily targeted at IP anomalies generated by the May 2009 IP surveys. The IP anomalies are broadly coincident with known gold occurrences and/or copper geochemical anomalies. RC drilling at Donald Well, Beefwood, Doolgunna and Shed Well will be directed towards the VTEM conductors identified in July 2009.

### **BACKGROUND TO REVERE PROJECT (100% INTEREST)**

The Company's Exploration Licences cover an area of 1,300km<sup>2</sup> and are located between 90 - 130km northeast of Meekatharra in Western Australia and cover Palaeoproterozoic rocks affected by the Capricorn Orogen, and are predominantly located within the Yerrida Basin. The primary target sought by the Company is one or more large mesothermal-style gold stockwork systems and/or volcanogenic massive sulphide copper/gold systems.
