

**DOOLGUNNA PROJECT – DRILLING TO COMMENCE 5<sup>TH</sup> NOVEMBER**

Enterprise Metals Limited (“Enterprise” or “the Company”, ASX: “ENT”) wishes to advise that RC drilling to test three prospects located at Doolgunna, Ruby Well West and Ruby Well East will commence in the first week of November.

The targets are coincident IP/geochemical anomalies in Narracoota Formation volcanics, adjacent to the Goodin Fault. The program has approval from DMP for up to 57 RC holes. (total approximately 6,000m)

**DOOLGUNNA PROSPECT**

At the Doolgunna Prospect, four targets have been identified for follow-up by drilling (12 holes total). The drilling will test IP anomalism co-incident with silver (max 350ppb), arsenic (max 57ppm), tin (max 4.6ppm), gold (max 30ppb) and tellurium (max 510ppb) geochemical anomalism. The location of the targets and IP traverses are shown in Figure 2 below in relation to the tin geochemical anomaly which has been superimposed on an image of the 1VD magnetics.

**RUBY WELL PROSPECT**

The Ruby Well drilling (up to 33 holes) is designed to test two discrete but areally extensive multi-element geochemical anomalies at the Ruby Well West (REA) and Ruby Well East (REB). The location of the IP traverses and the geochemical targets are shown in Figure 3.
