

9 November 2007

ASX ANNOUNCEMENT

Clearances Pending at Donald Well.

We advise that the Aboriginal Heritage and environmental surveys have been completed and are awaiting approval in the next few weeks.

Once received an auger drilling program will commence to test the base of the hardpan to define geochemical anomaly's for deeper drilling.

ENDS

Revere Mining Limited

The Greater Revere Project – located 750km northeast of Perth near Meekatharra in Western Australia's Mid West region – is considered highly prospective for gold as it's 'footprint' sits over the intersection of the northeast trending Greenbushes-Ranger continental lineament and the northwest trending Peak Hill-Broken Hill continental lineament (see figures 1 and 2).

Figure 1

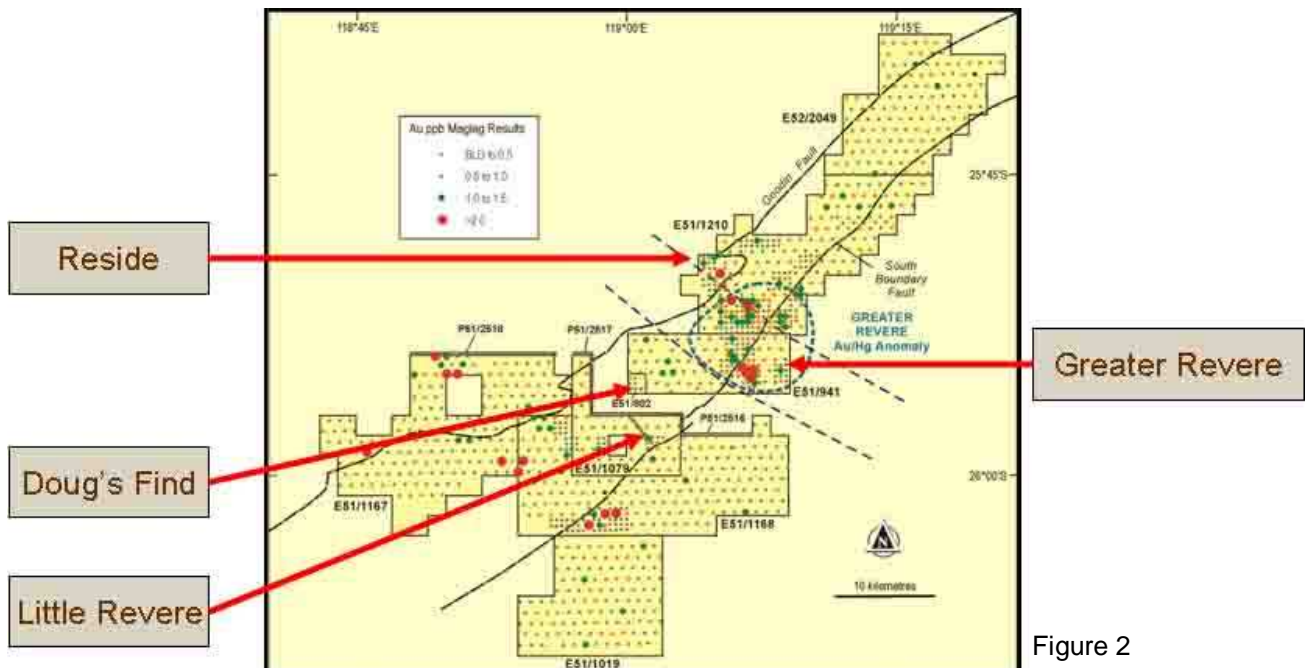

Figure 2

Revere Mining Limited has secured almost 1,000km² of tenements centred at the crossroads of two major ore rich continental lineaments.
