

BURRACOPPIN PROJECT

Enterprise Metals Limited (“Enterprise” or “the Company”, ASX: “ENT”) wishes to advise that RC drilling to test a variety of gold, nickel/platinum group elements (“PGE”) and iron ore targets at Burracoppin in Western Australia will commence in the first week of November. The drilling targets were selected following ground reconnaissance rockchip and soil sampling of magnetic anomalies generated from detailed airborne magnetic surveys.

Several banded iron formation (“Bif”) and associated goethite and hematite occurrences have been selected for RC drill testing, along with soil geochemical gold and nickel/PGE anomalies. The program has approval from DMP for up to 43 RC holes. (total approximately 5,000m)
